

Abbott established its first Nutrition R&D base in, Moorepark, Ireland in 2013. A global scientific team from Abbott is working with Moorepark scientists, focused on innovative research around alternative milk-based ingredients, including protein functionality. The Abbott–Moorepark partnership is one result of a general strategy to collaborate and partner globally, sharing Abbott’s R&D in key countries. A more localised approach to R&D will help support our growth in important global markets. This partnership has already created several new high-level jobs for scientists at Moorepark and within Abbott.
